

# Bee's Knees

### BACKGROUND:

In Neapolitan tradition, meals are meant as a sharing time in which grandmothers or mothers express their affection towards their children and grandkids by cooking their dishes. Nowadays many of those traditional recipes are lost in time. This happened because they were handed down practically, so it is hard to find them in a written form.

### BRIEF:

Adults have pleasant memories of what they used to eat when they were children. In fact, those smells and tastes, combined with those shared moments, were for them a gift of happiness.

### PURPOSE/REQUIREMENTS:

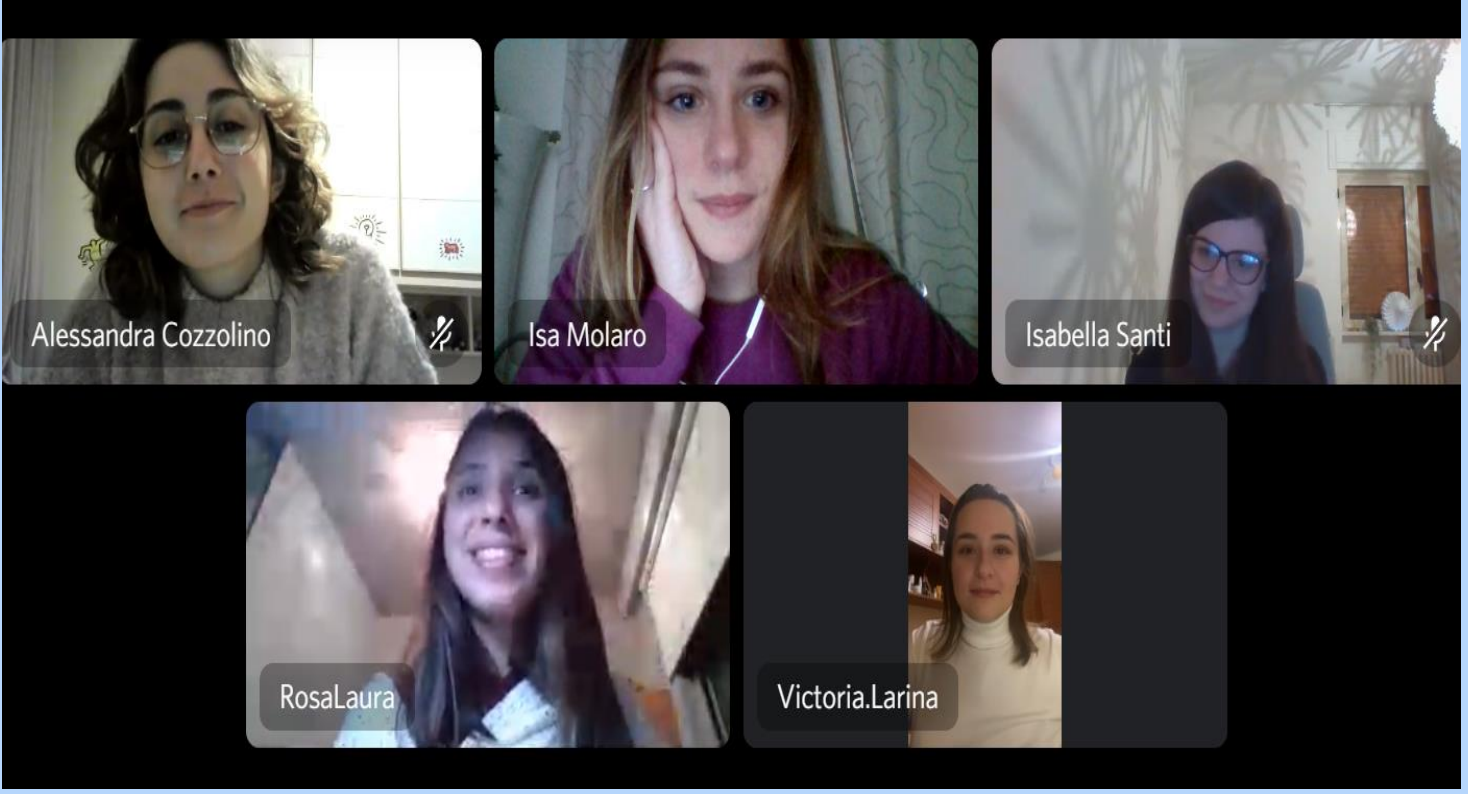

Affordable, usable and satisfying device, which is meant to offer traditional recipes with a modern touch and to built a bond between different generations

**CONTEXT:** Our product can be used in everyday life. It can be used especially in sharing times with the whole family, where tradition is the main ingredient

### COMMUNICATION:

Communication between us of team 09 was very good. Regarding team 01, communication was very pleasant with Victoria Larina, who always paid attention to what we showed her and understood our suggestions

### INITIAL DESIGN IDEAS

These are the intial ideas given by team 01. At the beginning their itentions were not so clear, but videocalls clarified everything

#### 1. recipe book

- A book with traditional recipes
- **Beautiful** cover
- «rub the page» feature- it lets you feel the smell on the paper if you rub a sticker
- QR-code for the web-site with the digital version of the recipe and videos of how to cook it- on the bottom of the page
- Additional space for making notes and putting down own recipes

#### 2. Voice assistant

In addition to our application / service, we offer **Voice assistant** that would not interfere you during the cooking process. Simply follow the voice in order to complete the dish. You can also change the voice of the speaker: Amalia, Lorenzo or Francesco. Voice assistant will be set by timing. You choose the recipe on the application, set the assistant which helps you to prepare food. While you're chopping ingredients, it will set the lovely music for you better mood. When you're done with preparing ingredients, it will tell you the steps that you should follow.

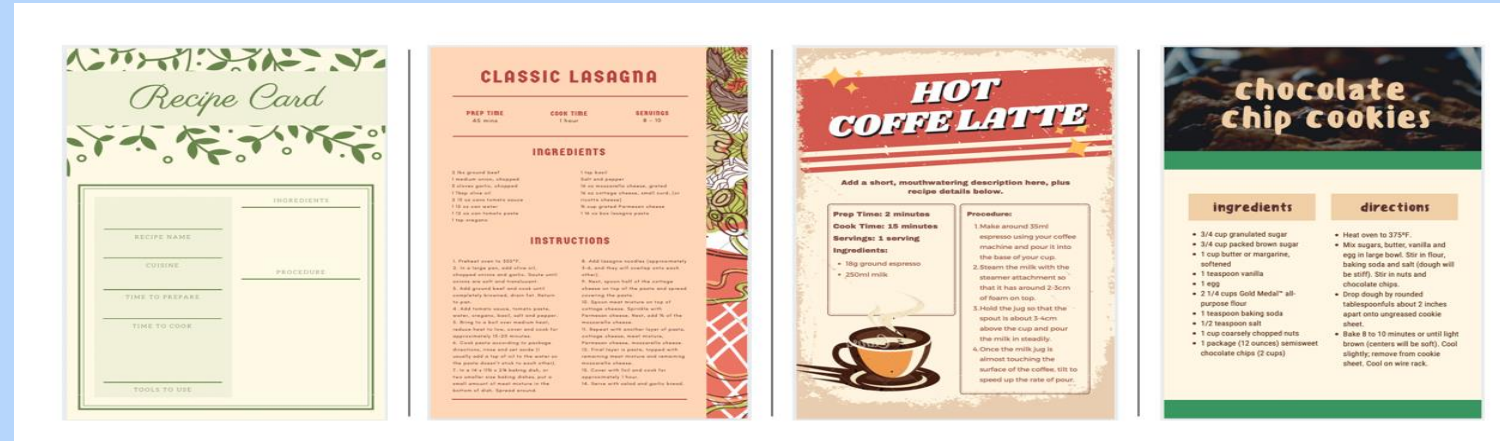

#### 3. smart multicooker

- We offer a smart multicooker capable of preparing a meal according to your unique family recipes. The voice assistant will make it easier to work with the multicooker and help you achieve an exceptional result.

## DESIGN EXAMPLES:

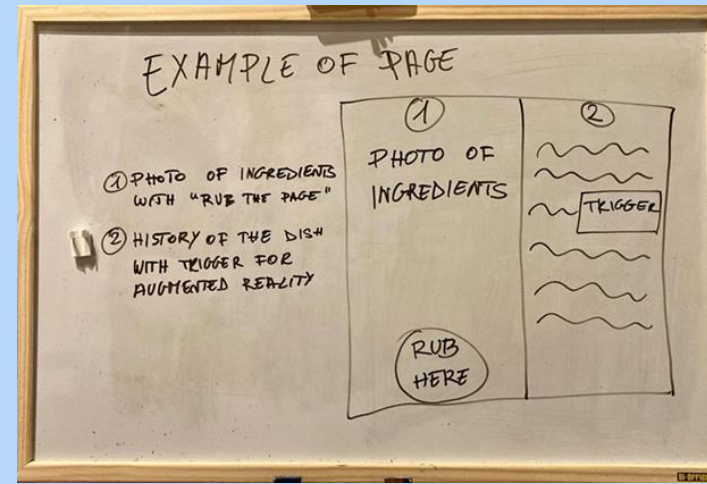

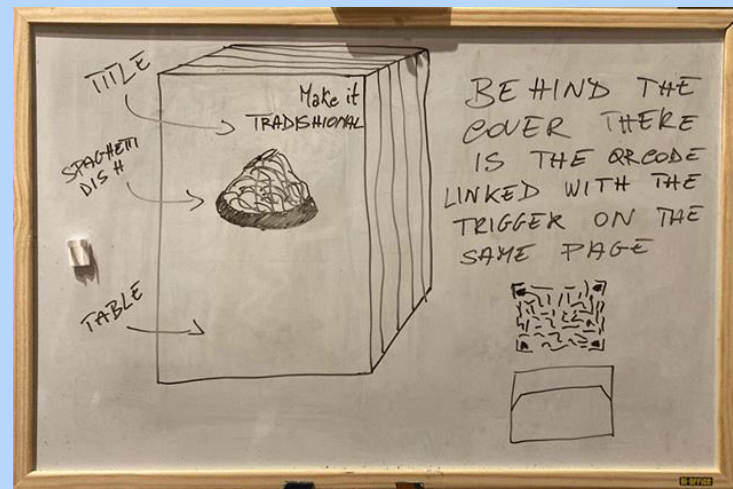

Our paired group gave us this example of design for our book. We suggested to enhance it in augmented reality recipes.

## WORK IN PROGRESS:

We thought to create a recipe book with some features, "rub the page", as they suggested, and augmented reality, by which you can see the recipe in 3D.

## PROTOTYPING:

The sketch came to life, and this is the physical example of what we imagined. These pictures express our ideas and we are very satisfied with that

## FINAL EVALUATION:

In the beginning we had a good interaction with team 01, but in the following weeks we had some problems with the timeline. The realization of our book has been possible thanks to the collaboration with Victoria Larina, which allowed us to get to know with another culture and to learn many things, enriching our knowledge
