

GROUP 9

SCHEME

REPORT

—● We hope you enjoy our brief
presentation of ones 'joy'
and 'happiness'

Team name And Logo...

Our team name is 'Double Vision' as not only are we creating and recognizing a problem seen all throughout the world, but on the other hand are also able to solve it .

Our team logo is what seems to be two people minimalized into a line drawing. One being blue representing a woman and another being orange representing a man. These two come together to form a heart with eachothers help. This demonstrates the way in which we would like to help elderly people in our project, and the way in which we will connect with eachother even though we may be in seperate countries.

Major problems according to grandparents

Our conversations with elderly

While talking to our grandparents, all of us came to conclusions that as happy as they are, there are many issues to be seen in their lives.

Their perspective

From what our grandparents were saying, they appreciate absolutely every part of life even though sometimes it may be tricky. It's only fair we come up with a solution for the things they struggle with.

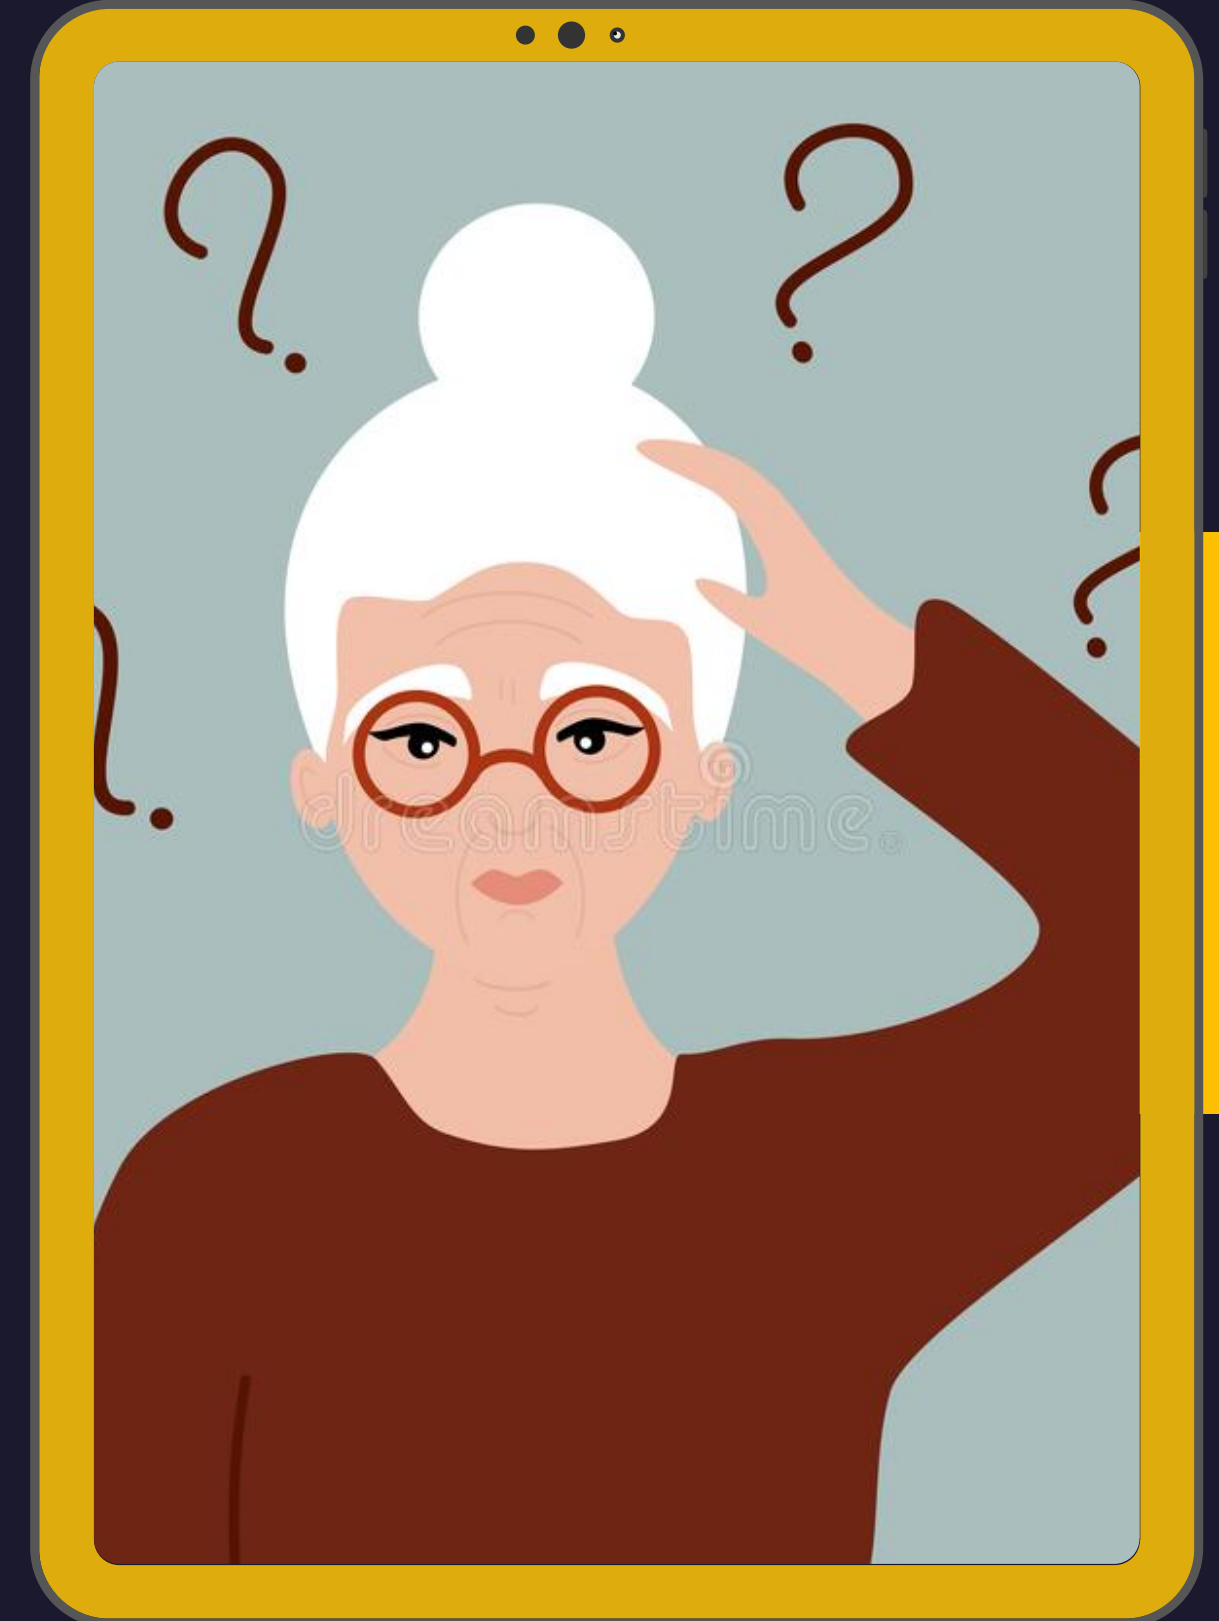

Struggling with happiness

They find new things complicated

Many feel lonely

Some get frustrated not knowing how to do things (for example using new technology)

Memory loss

HOBBIES

To be able to solve these issues, with the help of our grandparents we had to decide what elderly people enjoy doing in their free time.

Reading

Going on walks

calling family

watching tv

We believe

That elderly people are restricted from doing things that bring them joy due to reasons that they can't control – memory loss, stress, health issues, lack of understanding technology.

Our solution is pretty simple.

We as designers decided we would like to create an app – free off charge – for elderly people struggling with remembering things, struggling with reading their phones/using their tvs etc etc.

The App

Things it would contain

01 Very simple easily accesible device

The app would have to have very few buttons and a simple layout. It would be voice control activated and always running even while using other devices.

02 Voice control

The voice control would allow the elderly to activate anything they would like. Reminders to remind them whenever it's time to do something, Activating calls through voice and not having to get confused by any numbers on the screen or maybe even alarms set for specifc times everyday.

03 A fun side to the app

Many elders enjoy reading as a hobby, but some are slowly losing their vision/finding it hard to concentrate. A feature we'd love to introduce to this app would be audiobooks. This means that the older generation wouldn't have to worry about reading books as they'd have a device doing all the work for them

04 Prayers

We would also love to include prayers (of different religions) on the app as we know many grandparents and parents would really enjoy a feature like this.

THANKS FOR YOUR TIME

Laura Bien, Larissa Bus, AJ Binumon
